

ARYAN JAIN

AI/ML Engineer | Founder | Delhi, India
aryan070606@gmail.com | github.com/aryan-766 | linkedin.com/in/aryanjain

SUMMARY

AI/ML Engineer and Founder with 2+ years of experience building production-grade AI systems, multi-agent architectures, RAG pipelines, and automation workflows. Currently AI Trainee at Ambrane and Founder of Synox AI and Raftra. Co-author of an IEEE paper on LLM security.

TECHNICAL SKILLS

AI / ML: Machine Learning, Deep Learning, Generative AI, LLMs, RAG, LangChain, LangGraph, CrewAI, Multi-Agent Systems, Prompt Engineering

Backend: Python, FastAPI, Django, Flask, Node.js, REST APIs, Docker, Kubernetes, AWS

Data: PostgreSQL, MongoDB, Supabase, Vector DBs (Qdrant, Pinecone), SQL

Automation: n8n, Make.com, Zapier — Pipelines & Workflow Orchestration

Frontend: React, TypeScript, Tailwind CSS, Framer Motion, GSAP, Three.js

EXPERIENCE

AI Trainee | **Ambrane** | Jun 2026 – Present

- Build production AI systems using LangChain, LangGraph, and Gen AI tools; develop ML/DL models and automation pipelines.

Founder & AI Engineer | **Synox AI** | Feb 2026 – Present

- Building an AI Workforce Operating System with multi-agent workflows, RAG (Brand Brain), LLM Router, and social media automation via n8n + Make.com + Supabase.

Founder | **Raftra** | Jan 2026 – Present

- Developing a marketing automation suite for agencies — one-click ad launches, workflow automation, and multi-platform integrations.

KEY PROJECTS

Warranty Fraud Detection Platform — *Python, FastAPI, Gemini 2.0 Flash, Streamlit*

- Multi-stage image forensics pipeline with AI risk agent; FastAPI backend + Streamlit frontend for analyst review.

Patient Churn Classifier — *Python, Deep Learning, TensorFlow, Healthcare*

- Deep learning model predicting patient churn and disease classification from medical data with strong AUC-ROC performance.

Stock Return Forecaster — *Python, Time Series, ML, FinTech*

- Time series + ML model for forecasting stock returns using automated historical data pipelines.

Fraud Invoice Detector — *Python, Scikit-learn, Classification*

- Ensemble ML classifier detecting fraudulent invoices; deployed as a REST API for financial system integration.

RESEARCH

Co-Author, IEEE Publication — *Partially Accepted*

- "Mitigating Jailbreaking and Prompt Injection in Large Language Models" — collaborated with 5 co-authors on LLM adversarial defense strategies.

EDUCATION

B.Tech — Computer Science & AI | ADGITM | CGPA: 8.0/10 | 2024–2028

Class 12 — Science: 84% | Class 10: 92%
